Product Description:

LP Software, Inc. is an industry leader in incident management and compliance auditing software that is easy to use, powerful, and saves you time and money. Our flexible solutions streamline your company's loss prevention, operations, employee relations, and risk management departments. Organizations large and small, in retail, telecom, and education, rely on our software suite.

■ **LP/Safety Incident Management**

Loss Prevention Management System (LPMS) is a software solution designed to reduce LP and risk management's time and effort in finding, responding to, and tracking incidents throughout your organization. LPMS is a web-enabled, centralized incident management solution that empowers management to control the workflow processes necessary to perform their job efficiently and with accountability. This powerful tool will immediately enable LP/risk personnel to streamline, manage, and track incidents of shoplifting, internal theft, restitution payments, customer accidents, and worker's comp cases.

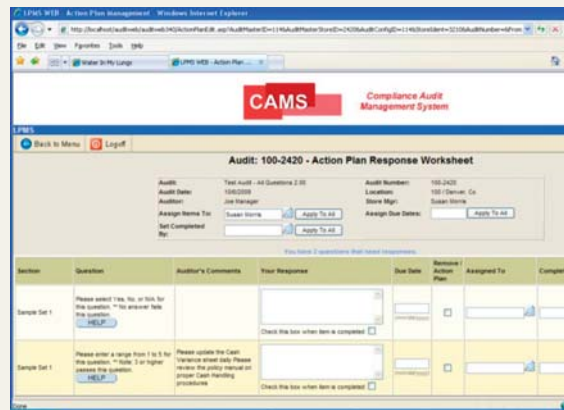

■ **Operational Audit Software**

Compliance Auditing Management System (CAMS) allows you to easily create your own audits, questions, and scoring. You can create as many audits as required within your organization. Automatic emailing to store, district, and regional managers combined with built-in-reports allow you to get real-time and historical analysis of audit data. Auditors can use the CAMS client on their laptops to perform audits and download the results. This eliminates the need to record scores on spreadsheets or on paper and having someone at corporate compile the results manually. CAMS-Mobile allows auditors to take an audit on mobile devices such as

Blackberrys and iPhones. Store managers can use the simple web-based version of CAMS to take self audits, look at their store's audit results, and complete action plans.

■ **Employee Relations Management**

Employee Relations Management System (ERMS) is designed for managing employee relations incidents. It is an excellent alternative to tracking incidents in Microsoft Access/Excel or home-grown systems. ERMS will help you manage all the details of an incident and provide you with greater visibility into incident activity. This helps provide your organization the information needed to minimize your risk of liability and maintain a positive work environment. Our quick-to-implement ERMS software provides capabilities for managing employee and labor relations incidents, such as employee misconduct, grievances, discrimination, harassment, wrongful termination, poor performance, and non-compliance issues.

Company Overview:

Since 1998, the team at LP Software, Inc. have been learning, creating, and perfecting ways to improve your productivity. We are committed to the development of best-cost, world-class software solutions that revolutionize the retail mission and contribute greatly to the success of our highly valued customers. Our employees love what they do, which makes our customer service stand out.
