**Retail Chain Store Specialists** — For more than 28 years, NuTech National has set the standard for excellence in installation, service, and monitoring in the alarm and CCTV industry. We focus on serving the needs of leading retailers throughout North America by offering cost-effective solutions toward protecting every asset — whether it be property, inventory, or people. When it involves electronic security, Nutech National is the name you can trust.

Nutech specializes in intrusion alarm conversions from other providers and, in most cases, can do this at no charge to our clients as our expert technical staff has download software to nearly every panel made. In addition to our low-cost monitoring, we offer six months free with conversion, and our project management team will work closely with the client to ensure a seamless transition. As a result, you realize a significant ROI in the shortest period of time.

As a national provider, NuTech National has the largest service network with more than 3,500 dealers, and our unique management style consistently delivers on-time and on-budget projects. Additionally, we service and install all major manufacturers' equipment, especially those considered non-proprietary, and offer product lines which are tailored to maximizing your specialized needs.

Additionally, coupled with our alarm monitoring services, we offer Nutechlink, which is our real-time, web-based alarm management tool which allows you to:

- View all alarm activity
- Make code changes, edits, or deletions
- Request service
- Set up auto-email reports
  - Manage false alarms
  - Monitor employees entering stores outside of normal hours
  - Receive notification when zones are being bypassed
  - Receive notification when stores are not sending signals
- Web-hosted installation photos which further validate your standards are being met

Further, we have a wide variety of CCTV solutions whether it is a four-camera DVR installation for the budget minded or a state-of-the-art technology such as our cutting edge Hybrid Video Recorder. This PC based system is the next generation in CCTV and offers many advantages over a standard DVR such as storage/camera expandability, flexibility in analog & IP camera combinations, and limitations due to proprietary software.

### Windows-based Hybrid Technology

The GT Series DVR is high speed hybrid technology loaded with these features:

- Up to 480 FPS
- Digital image quality
- Integrated point of sale
- Remote view using Internet Explorer, wireless PDA, or smartphone
- Dual hard drives for the operating system and for video. Drives up to 8 TB
- Dual core Intel CPU 2.6 GHZ with option for quad core CPU
- Embedded operating system
- Allows for any combination of IP or analog cameras
- Utilizes H.264 compression
- Writeable CD
- We have license authority to modify the DVR software to best meet your needs
- Supports resolutions from 1 CIF to 4 CIF
- Password-protected DVR can be set for different access levels
  - Full control of the DVR
  - Live view, playback, burn CD, control cameras, motions detection
  - Live view and playback only
- Three-year warranty

Finally, as a national retail chain, look no further than NuTech National to cover your entire alarm and CCTV needs with benefits such as single point of contact, one master service agreement, predetermined pricing with uniform terms and conditions, a single company-wide web-based account portal, customized consolidated billing, and a commitment from our team to deliver exceptional customer service. We can equally manage monitoring, installations, and emergency service at the store level as well as handle roll-outs of large projects such as conversions and integrated solutions. Let's talk about solutions that make sense.
